

ContractGuard – API Spec Test Generation & Runner

Students: Justin Siak, Chunyang Wang – Computer Science

Supervisor: Dr. Graham Healy

What it is.

ContractGuard is a tool for testing API spec integrity. It does so through parsing, generating tests, running tests, and showing results. AI insight is given based off failed tests and can suggest test cases.

Configurability

Quickly change LLM models, customise prompt, and edit test cases.

Logging

View past runs, statistics, responses.

GitHub Actions

Automatically run tests against spec changes, generates summary and writes to PR comments.
